Lightness carries the order, hue adds the range

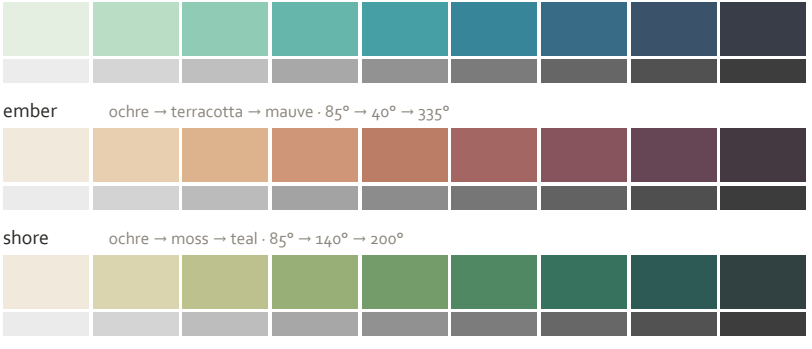

Vellum gradients, light twin · nine stops each, built in OKLCH · greys of equal luminance computed with colorlab

a Three gradients over their greyscale: the order survives without the hue

lagoon — moss → teal → indigo · 140° → 200° → 265°

ember — ochre → terracotta → mauve · 85° → 40° → 335°

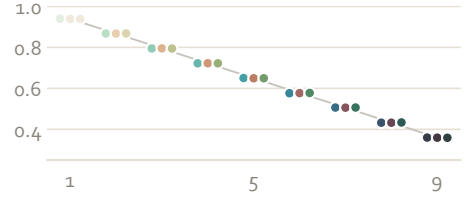

shore — ochre → moss → teal · 85° → 140° → 200°

upper strip: the nine stops · lower strip: the grey of equal luminance, hue removed

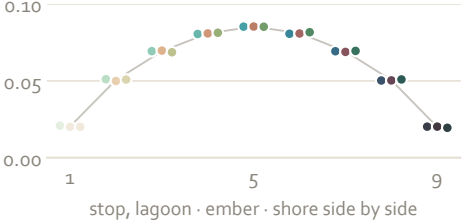

b Lightness falls 0.07 per stop

OKLCH lightness L

c Chroma peaks at 0.085 mid-way

OKLCH chroma C

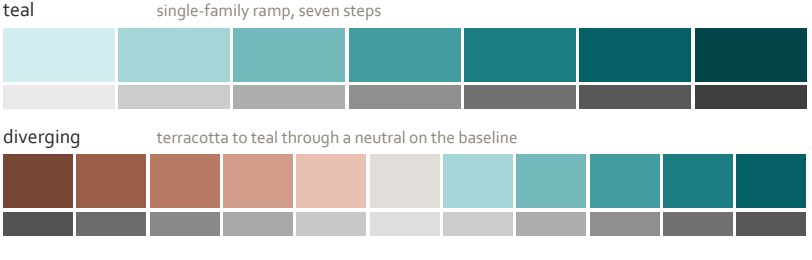

stop, lagoon · ember · shore side by side

d One family orders by lightness; the diverging scale orders from its middle

teal — single-family ramp, seven steps

diverging — terracotta to teal through a neutral on the baseline

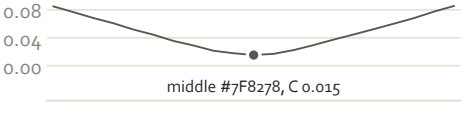

e Complements joined directly go grey

the teal and terracotta tones interpolated in OKLab

OKLCH chroma C along the join
