Low-carbon sources made 42.6 % of the world's electricity in 2025, up from 35.3 % in 2000, and outgrew demand, so fossil generation fell

In 2025 world generation rose by 842 TWh: low-carbon sources added 883 TWh, fossil fuels −41 TWh, and solar passed wind

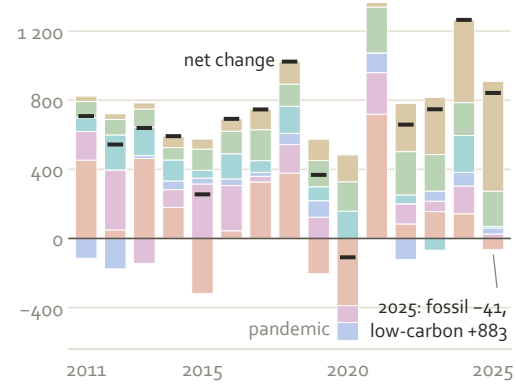

a World electricity by source, 2000–2025

thousand terawatt-hours a year
