Fifteen of 225 tree species hold half of Barro Colorado's 21 457 trees, while 19 were found once

Barro Colorado Island, Panama · 50 one-hectare plots, trees ≥ 10 cm in diameter · terracotta: the ten commonest species, indigo: the 19 singletons

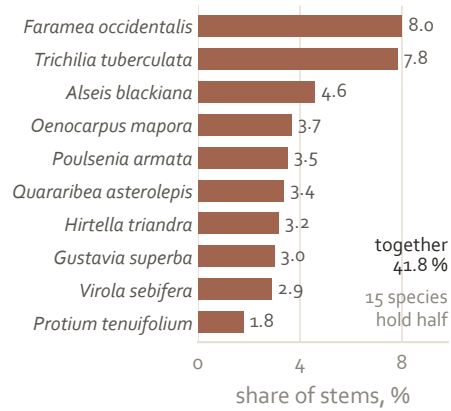

a Abundances span three orders; a lognormal fits best

stems in 50 ha, log scale

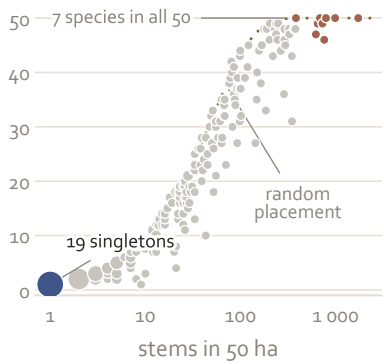

b Ten species hold 42 %

share of the 21 457 stems

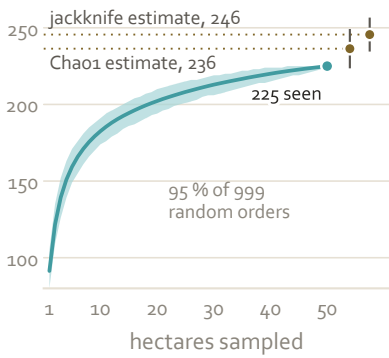

c 66 % fill fewer plots than chance

plots occupied, of 50 · dot area: species

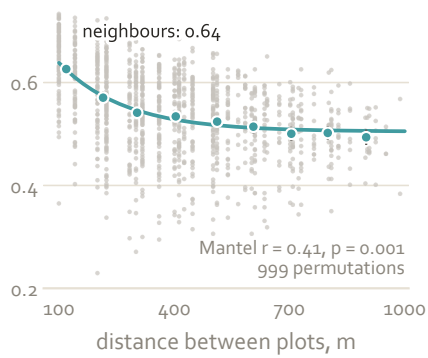

d 50 ha still miss 11 to 21 species

species

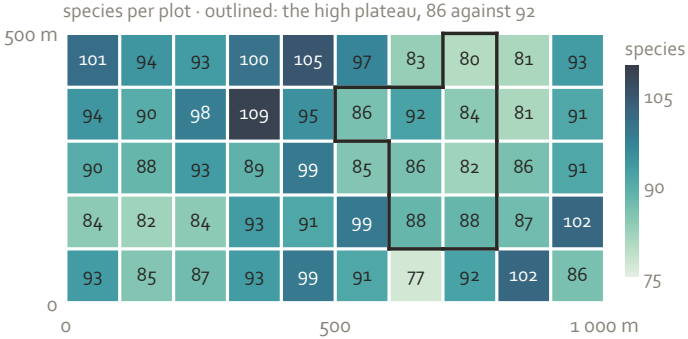

e Similarity falls from 0.64 to 0.49 with distance

Bray–Curtis similarity · dots: 1 225 pairs

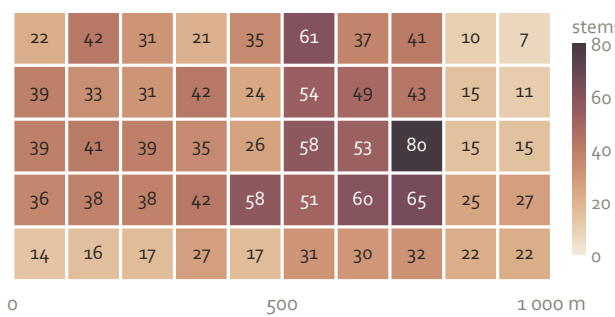

f 77 to 109 species in every hectare

species per plot · outlined: the high plateau, 86 against 92

g The commonest tree is everywhere, 7 to 80 per hectare

stems of Faramea occidentalis per plot

Data: Barro Colorado Island 50-ha plot, trees ≥ 10 cm dbh, 1982 census (Condit et al. 2002, Science), via R vegan::BCI · bci_forest.py · git 6c65dfc-dirty
