Lightness carries the order, hue adds the range

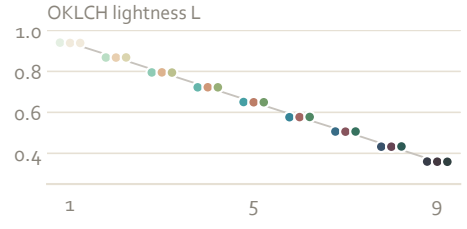

Vellum gradients, light twin · nine stops each, built in OKLCH · greys of equal luminance computed with colorlab

a Three gradients over their greyscale: the order survives without the hue

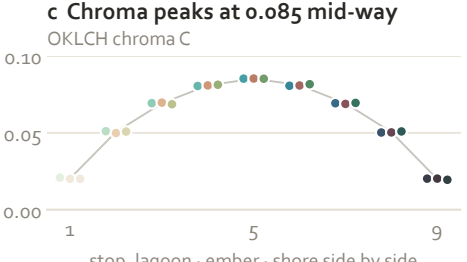

upper strip: the nine stops · lower strip: the grey of equal luminance, hue removed

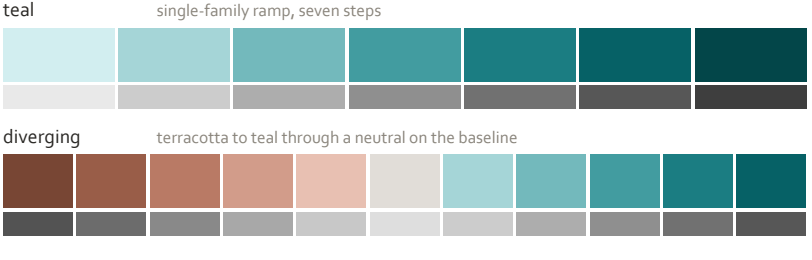

b Lightness falls 0.07 per stop

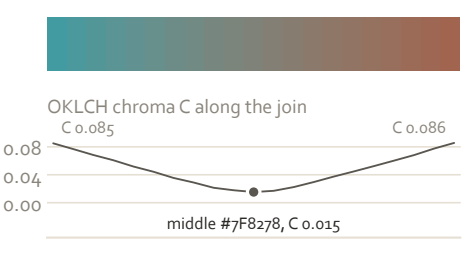

c Chroma peaks at 0.085 mid-way

d One family orders by lightness; the diverging scale orders from its middle

e Complements joined directly go grey
