91 % of carps, minnows and loaches belong to families that arose after the dinosaurs

Cypriniformes, 1,703 species, one per genus (371) drawn · crown: age of a family's last common ancestor

Fossil calibrations in the tree

(A) † *Amyzon aggregatum*
Crown Catostomidae; at least 48.9 million years old

(B) † *Cyprinus maomingensis*
Total group Cyprinini; at least 40.1 million years old

(C) † *Huashancyprinus robustispinus*
Total group Cyprinus; at least 23.0 million years old

How to read it

branch colour and number: family

bar and row: the species of that family

dotted line: end of the Cretaceous, 66 Ma

lettered disc: a fossil-calibrated node

fish: a stock outline, not the species

crown: age of a family's last common ancestor
