Enrichment past $K = 2.33$ turns a stable equilibrium into boom and bust

Rosenzweig–MacArthur model $\dot{N} = N(1 - N/K) - NP/(1 + N)$, $\dot{P} = 0.5\,NP/(1 + N) - 0.2P$ · densities scaled

model after Rosenzweig (1971), Science 171, 385–387; orbits integrated with SciPy in prepare_data.py · tikz_enrichment.tex · git a3ce420
